

Ildar Islamov

System Analyst · Analyst-Developer

Almaty, Kazakhstan · ildarislamov72@gmail.com · linkedin.com/in/islamov-ildar · streakapp.kz · github.com/Ildar69 · tg: [@created_by_islamov_ildar](https://t.me/created_by_islamov_ildar)

ABOUT

System Analyst and Analyst-Developer with 2+ years of total experience. Not a classic specialist with certificates — someone who sees a problem and builds a solution from scratch to production. I independently design, develop, and deploy digital systems in manufacturing environments. Stack: Python, Django, PostgreSQL, JavaScript, Google Apps Script, Git.

EXPERIENCE

System Analyst · Astana Motors Manufacturing Kazakhstan

November 2025 — Present

Almaty, Kazakhstan · 7 months

Paint Quality Monitoring System — Body Paint Shop (5 lines):

- Designed and deployed a distributed data collection system from tablets on the line: 350+ records per day, zero manual aggregation
- Built real-time anomaly detection — alert reaches management within minutes of threshold breach (previously: detected during manual end-of-shift review)
- Developed automated shift reports: DPU, DPR, hourly defect distribution, day-to-day trends, model breakdown
- Implemented cross-spreadsheet ETL with deduplication and hourly archive sync from 7 sources
- Web interfaces running directly in the browser — no software installation required on the production floor

Paint Quality Monitoring System — Plastic Paint Shop (2 lines):

- Designed a separate architecture tailored to the plastic shop's specific process
- Mobile quality control app: body part selection, defect registration, OK/Repair/Rework statuses, role-based access (inspector/manager)
- Backend on PostgreSQL (Neon): normalized schema, 10 tables — users, sessions, defects, repair logs

Engineering Operations Portal (v1.1):

- Designed and deployed an operational portal for the engineering department: Kanban with drag & drop, 5-level role system, three notification channels in parallel — Web Push + Telegram bot + in-app. PWA — installable on any device. Stack: Python, Django 5.2, DRF, PostgreSQL, JavaScript, Git. Live: engineering-platform-production.up.railway.app

Deployment and Stakeholder Work:

- Integrated systems into both shop workflows, trained operators on tablet-based data entry
- Participate in defect reviews with engineers and management, propose data-driven solutions

Database Manager / Data Analyst · ACT Kazakhstan

August 2024 — November 2025

Almaty, Kazakhstan · 1 year 4 months

- Designed and launched 5 online surveys, collected 3,000+ respondents across 6 research projects
- Prepared 15+ analytical reports and client presentations from raw data
- Statistical analysis in IBM SPSS and Excel: segmentation, cross-tabulation, pattern identification
- Managed data collection pipelines, including unstructured formats
- Client contact point: requirements gathering, results presentation, report delivery

OWN PROJECT

streakapp.kz — Habit Tracker

2026

Django · PostgreSQL · Python · Deployed

- Built and deployed a habit tracker on a custom domain — from idea to live users in 4 days. Telegram bot with automated reminders, Web Push notifications, PWA. Stack: Django, PostgreSQL, Python, Telegram Bot API, JavaScript.

SKILLS

Languages: Python, JavaScript (Apps Script, Node.js), SQL, HTML/CSS

Databases: PostgreSQL — schema design, normalization, indexes; Google Sheets (IMPORTRANGE/QUERY ETL)

Frameworks: Django, Google Apps Script — triggers, LockService, Web App deploy

Tools: Git / GitHub, AppSheet, Looker Studio, IBM SPSS

Analytics: DPU/DPR metrics, anomaly detection, KPI dashboards, pivot analysis

Domain: Quality control in automotive manufacturing, defect analysis, paint coating

EDUCATION

Bachelor's, Information Technology

2022 — 2024

Almaty University of Energy and Communications

College, Information Systems

2018 — 2022

Almaty University of Energy and Communications
